

Genome BC leads genomics innovation on Canada's West Coast, facilitating the responsible integration of genomics into society. Since 2000, Genome BC has attracted over \$1.1 billion in direct co-investment to the province, which has contributed to funding more than 600 genomics research, technology platforms and innovation initiatives.

We thank our funding partners including the Province of British Columbia, the Government of Canada through Genome Canada and Pacific Economic Development Canada and project co-funders.
